1 When implementing linear regression of some dependent variable y on the set of independent variables $\mathbf{x} = (x_1, \ldots, x_r)$, where r is the number of predictors, which of the following statements will be true?

Ans – a and b both

a) $\beta_0, \beta_1, \ldots, \beta_r$ are the regression coefficients.

 b) Linear regression is about determining the best predicted weights by using the method of ordinary least squares.

2) What indicates that you have a perfect fit in linear regression?

Ans:- d) The value $R^2 = 1$, which corresponds to SSR = 0

3) In simple linear regression, the value of what shows the point where the estimated regression line crosses the y axis?

Ans:- b) B0

4) Check out these four linear regression plots

Check out these four linear regression plots

Ans:- b) The top-right plot

5) There are five basic steps when you're implementing linear regression:

 • a. Check the results of model fitting to know whether the model is satisfactory.

• b. Provide data to work with, and eventually do appropriate transformations.

• c. Apply the model for predictions.

• d. Import the packages and classes that you need.

• e. Create a regression model and fit it with existing data. However, those steps are currently listed in the wrong order. What's the correct order?

Ans :- d) d, b, e, a, c

6) Which of the following are optional parameters to LinearRegression in scikit-learn?

a) Fit

b) fit_intercept

c) normalize

d) copy_X

e) n_jobs

f) reshape

Ans :- b) fit_intercept

c) normalize

d) copy_X

e) n_jobs

f) reshape

Except Fit parameter all are optional parameter

7) While working with scikit-learn, in which type of regression do you need to transform the array of inputs to include nonlinear terms such as x^2?

 a)Multiple linear regression

b) Simple linear regression

c) Polynomial regression

Ans:- c) Polynomial regression

8) You should choose stats models over scikit-learn when:

A)You want graphical representations of your data.

 b) You're working with nonlinear terms.

 c) You need more detailed results.

d) You need to include optional parameters

Ans :- c) You need more detailed results.

9) _____ is a fundamental package for scientific computing with Python. It offers comprehensive mathematical functions, random number generators, linear algebra routines, Fourier transforms, and more. It provides a high-level syntax that makes it accessible and productive.

Ans:- b) NumPy

30) _____ is a Python data visualization library based on Matplotlib. It provides a high-level interface for drawing attractive and informative statistical graphics that allow you to explore and understand your data. It integrates closely with pandas data structures.

 Ans:- b) Seaborn
